Hiring Committee
Department
University

Dear Members of the Search Committee,

As an environmental scientist, my work combines remote sensing, environmental modeling, geographic information systems (GIS), and scientific computing to study environmental processes and support evidence-based decision making. My background includes six years of experience in scholarly publishing, technical editing, and software development at Mathematical Sciences Publishers. I am now seeking a postdoctoral opportunity to apply my interdisciplinary background to collaborative environmental research.

During my doctoral research, I investigated environmental processes using satellite remote sensing, geographic information systems (GIS), and quantitative data analysis. My work focused on the estimation of land surface temperature from Landsat 8 imagery, including a comparative evaluation of multiple retrieval algorithms. Through this research, I developed a strong foundation in environmental modeling, spatial analysis, and scientific computing using R. The work culminated in a peer-reviewed publication and strengthened my interest in reproducible, data-driven environmental research.

At Mathematical Sciences Publishers, I contributed to scholarly publishing through technical editing, production, and software development. Collaborating with authors, editors, mathematicians, and production staff, I contributed to publication workflows, $\text{\LaTeX}$ journal class development, and production software improvements. This experience strengthened my attention to detail, technical communication skills, and appreciation for reproducible, high-quality scientific publishing.

Today, my research interests lie at the intersection of environmental science and scientific computing, with a particular focus on computational approaches and open-source tools for environmental data analysis. I am particularly interested in collaborative research addressing complex environmental challenges through quantitative, reproducible methods.

I would welcome the opportunity to contribute my interdisciplinary background in environmental science, scientific computing, and scholarly publishing to your research program. I look forward to discussing how my experience and research interests could contribute to your work.

Sincerely,

Md Qutub Uddin Sajib
